

Interactive / complex / 6

query	Interactive / complex / 6				
title	Tag co-occurrence				
pattern	 <p>The diagram illustrates the query pattern. It starts with a person: Person entity (orange box) which has a variable <code>id = \$personId</code>. This person is connected via a <code>knows*1..2</code> relationship to an otherPerson: Person entity (orange box). The otherPerson entity is connected via a <code>hasCreator</code> relationship to a Post entity (red box). The Post entity is associated with a <code>count</code> variable. Additionally, a tag: Tag entity (pink box) with variable <code>name = \$tagName</code> and an otherTag: Tag entity (pink box) with variable <code>name ≠ \$tagName</code> are both connected to the Post entity via <code>hasTag</code> relationships.</p>				
desc.	Given a start Person and some Tag, find the other Tags that occur together with this Tag on Posts that were created by start Person’s friends and friends of friends (excluding start Person). Return top 10 Tags, and the count of Posts that were created by these Persons, which contain both this Tag and the given Tag.				
params	<div><div>1</div><div>personId</div><div>ID</div><div></div></div> <div><div>2</div><div>tagName</div><div>Long String</div><div></div></div>				
result	<div><div>1</div><div>otherTag.name</div><div>Long String</div><div>R</div><div></div></div> <div><div>2</div><div>postCount</div><div>32-bit Integer</div><div>A</div><div>Number of Posts that were created by friends and friends of friends, which have the Tag otherTag</div></div>				
sort	<div><div>1</div><div>postCount</div><div>↓</div><div></div></div> <div><div>2</div><div>otherTag.name</div><div>↑</div><div></div></div>				
limit	10				
CPs	5.1, 8.2				
relevance	This query looks for paths of lengths three or four, starting from a given Person, moving to friends or friends of friends, then to Posts and finally ending at a given Tag.
