

Interactive / complex / 14

IC 1	query	Interactive / complex / 14				
IC 2	title	Trusted connection paths				
IC 3	pattern	<div><div>Enumerate all unweighted shortest paths on knows edges from person1 to person2. </div><div>For each edge on the path, calculate a weight based on interactions between the pair of Persons of the edge, are calculated as a sum of cases #1 and #2 for the Persons (both ways), and the sum of these weights determine the total weight of each path. </div></div>				
IC 4		<div><div>Case 1: Replies on Posts, weight += 1.0 × count(c) </div><div>Case 2: Replies on Comments, weight += 0.5 × count(c1) </div></div>				
IC 5		desc.	<p>Given two Persons, find all (unweighted) shortest paths between these two Persons, in the subgraph induced by the knows relationship.</p> <p>Then, for each path calculate a weight. The nodes in the path are Persons, and the weight of a path is the sum of weights between every pair of consecutive Person nodes in the path.</p> <p>The weight for a pair of Persons is calculated based on their interactions:</p> <ul style="list-style-type: none">• Every direct reply (by one of the Persons) to a Post (by the other Person) contributes 1.0.• Every direct reply (by one of the Persons) to a Comment (by the other Person) contributes 0.5. <p>Note that interactions are counted both ways (e.g. if Alice writes 2 Post replies and 1 Comment reply to Bob, while Bob writes 3 Post replies and 4 Comment replies to Alice, their interaction score is $2 \times 1.0 + 1 \times 0.5 + 3 \times 1.0 + 4 \times 0.5 = 7.5$).</p> <p>Return all the paths with shortest length, and their weights. Do not return any rows if there is no path between the two Persons.</p>			
IC 6						
IC 7						
IC 8	params	<div><div>1</div><div>person1Id</div><div>ID</div><div></div></div> <div><div>2</div><div>person2Id</div><div>ID</div><div></div></div>				
IC 9	result	<div><div>1</div><div>personIdsInPath</div><div>[ID]</div><div>C</div><div>identifiers representing an ordered sequence of the Persons in the path</div></div>				
IC 10		<div><div>2</div><div>pathWeight</div><div>64-bit Float</div><div>C</div><div></div></div>				
IC 11	sort	<div><div>1</div><div>pathWeight</div><div>↓</div><div>The order of paths with the same weight is unspecified</div></div>				
IC 12	CPs	3.3, 5.3, 7.2, 7.3, 7.5, 7.7, 8.1, 8.2, 8.3, 8.6				
IC 13	relevance	<p>This query looks for a variable length path, starting at a given Person and finishing at an another given Person. This is a more complex query as it not only requires computing the path length, but returning it and computing a weight. To compute this weight one must look for smaller sub-queries with paths of length three, formed by the two Persons at each step, a Post and a Comment.</p>
