query	Interactive / complex / 3		
title	Friends and friends of friends that have been to given countries		
pattern		— hasCreator –	xCount = count Message isLocatedIn → countryX: Country
		nascreator	\$startDate ≤ creationDate name = \$countryXName
	person: Person	otherPerson: Person	<pre>\$ \$startDate + \$durationDays</pre>
	id = \$personId		isLocatedIn City
	fir	stName stName	yCount = count
		↑	Message
		hasCreator—	\$startDate ≤ creationDate ≤ \$startDate + isLocatedIn → name = \$countryYName
			\$durationDays
	Given a start Person, find Persons	that are their fr	iends and friends of friends (excluding start Perso
desc.	that have made Posts / Commen	nts in both of th	e given Countries, CountryX and CountryY, within
	given period. Only Persons that	are foreign to 0	Countries CountryX and CountryY are considered, th
	is Persons whose location is nei	ither CountryX n	Or CountryY.
params	1 personId ID		
	2 countryXName String		
	3 countryYName String		
	4 startDate Date	Beginn	ing of requested period
	5 durationDays 32-bit Int	Duratio	on of requested period, in days. The interval
	duracionbays 32-bit iiit	[startD	ate, startDate + durationDays) is closed-open
result	1 otherPerson.id	ID	R
	2 otherPerson.firstName	String	R
	3 otherPerson.lastName	String	R
	4 xCount	32-bit Integer	A Number of Messages from Country CountryX created by the Person within the given time
			Number of Messages from Country Country Y
	5 yCount	32-bit Integer	created by the Person within the given time
	6 count	32-bit Integer	A count = xCount + yCount
sort	1 xCount ↓		
	2 otherPerson.id ↑		
limit	20		
CPs	2.1, 3.1, 5.1, 8.2, 8.5		
relevance	This query looks for paths of length two and three, starting from a Person, going to friends or friends of friends, are then moving to Messages. This query tests the ability of the query optimizer to select the most efficient join ordering which will depend on the cardinalities of the intermediate results. Many friends of friends can be duplicate, then is expected to eliminate duplicates and those people prior to access the Post and Comments, as well as eliminate those friends from Countries CountryX and CountryY, as the size of the intermediate results can be severely affected. A possible structural optimization could be to materialize the number of Posts and Comments created by a Personal progressively filter those people that could not even fall in the top 20 even having all their posts in the Countries.
