	desc.	Given a Tag (tag), find all Persons (person) that ever created a Message with the Tag. For each of these Persons (person) compute their "authority score" as follows:  • The "authority score" is the sum of "popularity scores" of the Persons (p2) that liked any of that Person's Messages with the given Tag (same criterion as for message1).  • A Person's (p2) "popularity score" is defined as the total number of likes on all of their Messages (message2).
